

Sofoniyas Shitaye Kebede

AI Implementation Specialist | AI/ML Systems & Automation

Addis Ababa, Ethiopia | +251 912 458 225 | sowwen0@gmail.com | huggingface.co/demeleww

PROFESSIONAL SUMMARY

Hands-on AI/ML and automation builder who translates business needs into scalable workflows, trained models, datasets, API integrations, and clear documentation for technical and nontechnical stakeholders. Experience includes end-to-end model training and dataset creation for cybersecurity, education, Amharic ASR/TTS, voice cloning, and call-center use cases. Particularly interested in inference engineering, running models locally and improving latency, throughput, and resource efficiency.

CORE SKILLS

Model and Dataset Development: End-to-end model training, dataset creation and curation, fine-tuning, experiment design, evaluation, Hugging Face, OmniVoice, multilingual NLP, ASR, TTS, voice cloning

AI Tools: ChatGPT/OpenAI, Codex, provider-ready Claude and Grok paths, OpenAI APIs, prompt and agent workflows

Inference Engineering: Local model execution and serving, performance profiling, latency and throughput optimization, memory-efficient inference, runtime tuning

Automation and Integration: n8n portfolio workflow, Zapier and Make.com workflow mapping, Python, REST APIs, JSON/YAML, SaaS integration, low-code design

CRM, Data and Reporting: HighLevel and AccuLynx connector design, CRM platforms, Google Workspace, document automation, data processing, workflow logic

Platforms and Communication: Hugging Face Hub, Google Colab, Git, Linux, English technical documentation, stakeholder-ready reporting

SELECTED AI IMPLEMENTATION EXPERIENCE

Independent AI/ML and Automation Projects | Remote | 2026 - Present

- Built and verified a portfolio n8n workflow for home-services lead operations, with AI-provider paths, HighLevel/AccuLynx CRM payloads, Google Workspace artifacts, testing controls, and Zapier/Make.com implementation mapping.
- Developed and published [OmniVoice Amharic](#), an open Amharic TTS and voice-cloning model with [50K+ verified all-time downloads](#) (the visible Hub counter reflects a rolling 30-day window); curated four speech datasets totaling about 331 hours and published model artifacts, configurations, documentation, and Colab inference guidance.
- Ran independent fine-tuning experiments for a cybersecurity model based on Qwen3.6-27B, covering dataset construction, training configuration, evaluation, and iterative failure analysis.
- Currently developing an Amharic voice tutor that combines ASR and TTS for spoken learning interactions, including speech-data preparation, multilingual behavior, and end-to-end evaluation.
- Currently developing an AI-assisted call-center system for a transport service, connecting speech input, agent responses, customer-intent handling, and operational routing workflows.
- Designed and ran a reproducible benchmark pipeline comparing four ASR systems across Amharic and English public test data; separated results by language and code-switching needs to guide model and training-data decisions.

SECURITY ENGINEERING EXPERIENCE

Independent Smart Contract Auditor / Security Researcher | Remote | 2022 - Present

- Public audit record (July 2026): [Sherlock](#) documents 17 high and 18 medium findings, 37 payouts, two third-place finishes, seven top-10 finishes, and 17 top-25 finishes; [Code4rena](#) verifies the jah warden identity.
- Review Solidity and EVM systems using manual analysis, Foundry testing, fuzzing, and static analysis; build reproducible proof-of-concept environments and evidence-backed reports.
- Automate environment setup, test execution, data capture, and verification with Python, PowerShell, APIs, and CLI tooling.
- Explain complex technical findings, assumptions, and operational impact in clear English documentation for varied audiences.

Web Security Researcher / Bug Bounty Hunter | Remote | 2020 - 2022

- Assessed web applications and networks using OWASP-based testing, Burp Suite, Wireshark, and controlled lab environments.

EDUCATION

B.Sc. in Computer Science - Current Student | Addis Ababa, Ethiopia | 2023 - Present

Coursework and independent study focus on AI systems, security, cryptography, and software engineering.
